CLUB

Summary points why people need to see your home

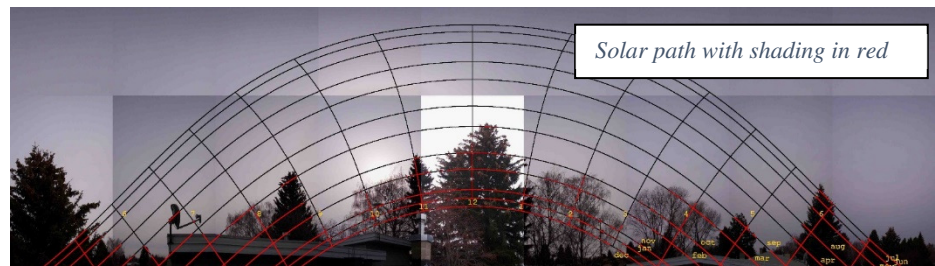

- This is a 60-year-old home that has had several improvements and the installation of a 32 panel solar array

What will people see and learn about at your home?

- Efficient irrigation system for the vegetable and flower gardens are an efficient way to save on water costs and preserve our precious water, yet benefit from delicious homegrown vegetables
- Results of 6.5 years of solar production, how this has saved on electricity costs and how shading and seasonality affect their performance

What are the main things people will see at your home?

- A plug-in hybrid vehicle as well as possibly an all electric one
- A vegetable and flower garden
- Information on how the solar panels have performed over 6.5 years.
- Information on what needs to be done to have solar installed in Lethbridge. The obstacles. The benefits.
